

# Boosting Efficiency & Reducing Costs

## Modernizing Technology Infrastructure for Enhanced Performance & Scalability

Cognitive Services

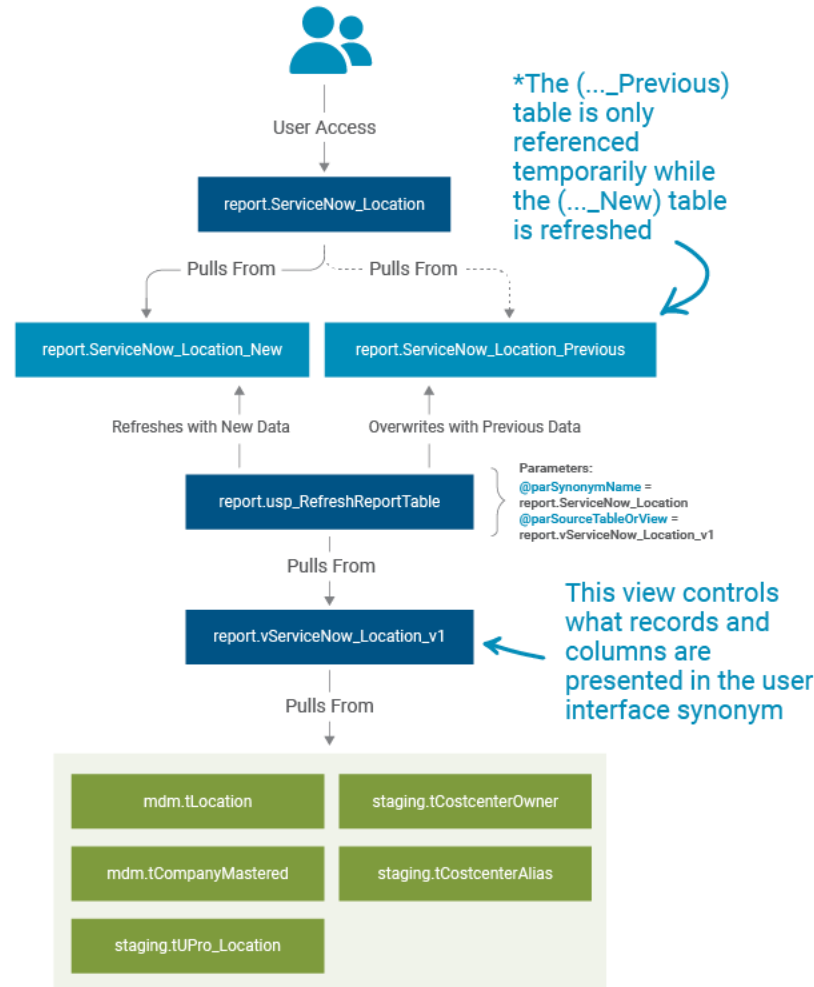

Azure OpenAI

### PROBLEM

- Relied on Netezza for data warehousing & Cognos for reporting – both costly & outdated
- Legacy systems caused slow employee provisioning, high data enrichment costs & error-prone onboarding
- Fragmented data sources hindered data quality, requiring third-party platforms for cleansing & reporting

### SOLUTION + RESULT

- Migrated from Netezza to Azure Synapse & from Cognos to Power BI, cutting costs while boosting scalability & performance
- Implemented Profisee for MDM & optimized HR processes, reducing provisioning to 2 hours, eliminating service charges & minimizing onboarding errors
- Established ingestion pipelines & self-service tools, improving data quality & ensuring reliable updates without third-party reliance

### AI COMPLEXITY LEVEL
